

Odysseus Space Contest

14 Std. ·

It was really hard for the jury panel of the regional final, organised by the University of Graz in Austria, to select the three top projects (one in the Pioneers and two in the Explorers category), as all participating entries were excellent.

In the Pioneers category, AlphaTeam from Germany, consisting of Alexander Haake and Lukas Mohr qualified to the International Final with the project "Magnet Rocket".

In the Explorers, Alice Antonelli with the project "Punto di vista orbital" won the first place and qualified to the Final of July. Dimitris Athanasopoulos and Konstantinos Karpelas with the project entitled "Moon Underground: Space Humanity's Room" were awarded the second place and qualified also to the Final.
